Abstract (en)

[origin: WO202229127A1] The invention relates to a method for carrying out a switchover of a first switching means (17) or at least one second switching means (18, 19) for equipment (20). The method is characterized by the following steps: - a control unit (10) receives a switch signal; - the first switching means (17) or at least the second switching means (18, 19) is selected for a switchover by means of the control unit (10) on the basis of the switch signal; - the at least one parameter of the first switching means (17) or at least the second switching means (18, 19) is retrieved by the control unit (10); - a locking condition for the first switching means (17) or for the at least second switching means (18, 19) is checked using the at least one retrieved parameter; and - the switchover is carried out by means of the selected first switching means (17) or the at least second switching means (18, 19) if the corresponding locking condition is met.
