Abstract (en)

[origin: WO202221554A1] The invention relates to a piece of mobile vehicle equipment (2) comprising a V2X communication management device (20), connected to a cellular communication network. The communication management device comprises a Radio Access Technology selection unit (200) which determines the Radio Access Technologies (RAT) available to be used for transmitting a data packet, associated with a V2X application executed by the piece of mobile vehicle equipment (2), to at least one receiving device (3). The selection unit (200) is configured to select the available Radio Access Technologies from a set of Radio Access Technologies, depending on target Quality of Service information comprising an n-tuple of performance indicators, the n-tuple of performance indicators comprising at least one performance indicator and being determined from a set of performance indicators chosen according to the V2X application.
