Abstract (en)
A laser working machine includes a first slot provided at another end portion of a first body. In the first slot, a first shielding plate and a first light transmissive plate are selectively insertable in a sealed manner. The first shielding plate is for shielding a first optical path. The first light transmissive plate has a first optical path hole through which the first optical path and a second optical path are connectable to each other. The laser working machine includes a second slot provided at a second body end portion of a second body. In the second slot, a second shielding plate and a second light transmissive plate are selectively insertable in a sealed manner. The second shielding plate is for shielding the second optical path. The second light transmissive plate has a second optical path hole through which the first optical path and the second optical path are connectable to each other.
