Abstract (en)

A support and guide structure (10) for a closed-loop articulated link conveyor is described, comprising: at least two guides (14A-14G), oriented according to respective development axis (X1-X7) and defining respective sliding surfaces for the conveyor; and at least one support component (12) comprising two surfaces (16, 18) opposite to each other, wherein the guides (14A-14G) protrude from a first surface (16) to define at least one sliding channel (20) to house at least one portion of the articulated links of the conveyor. The support and guide structure (10) comprises at least one housing (24; 24A, 24B; 24C, 24D) extending along a direction parallel to the development axis (X1-X7), and containing at least one respective reinforcing element (26A-26G) to limit the deformation of the support component (12). Each reinforcing element (26A-26G) has a cross-sectional shape which is compatible with the cross-sectional shape of the respective housing (24; 24A, 24B; 24C, 24D). Each reinforcing element (26A-26G) is manufactured with a material having a hardness which is greater than the hardness of the materials the guides (14A-14G) and the support component (12) are manufactured with.
