Abstract (en)
[origin: CN114109576A] The invention relates to a distribution device for distributing a fluid flow, comprising a main channel and a plurality of outflow channels branching off from the main channel, the distribution device being designed to distribute the fluid flow entering the main channel to the outflow channels. The invention relates to a dispensing device comprising a main channel, in which an inner channel is arranged, said inner channel being designed to guide a fluid entering the inner channel to at least one outflow channel, and wherein the dispensing device has a blocking mechanism for blocking a fluid flow from the main channel into the inner channel.
