Abstract (en)  
[origin: WO2020225407A1] The invention relates to a cleaning apparatus for cleaning more particularly electrical components (28) by means of a gaseous cleaning medium, comprising a cleaning chamber (12) having an interior (18) and a wall (16) enclosing said interior, a receptacle (30) for the component (28) in the interior (18) and a flow device (34) for the cleaning medium which comprises a pressure generation device (14) and comprises or forms at least one inlet (44, 46) into the interior (18) and at least one outlet (42) out of the interior (18), wherein a pressure difference can be provided between the at least one inlet (44, 46) and the at least one outlet (42) by means of the flow device (34) and the flow device (34) is formed such that the cleaning medium in the interior (18) forms a vortex flow (54, 56), at least in sections, from the at least one inlet (44, 46) to the at least one outlet (42).
