Abstract (en)

[origin: WO2020225191A1] A rear axle (100) for a two-track vehicle, the rear axle (100) having a first longitudinal link (102), a first wheel carrier (104) with a first wheel centre (106) and a first longitudinal strut (110), forming a first coupling mechanism that is effective in a longitudinal direction of the vehicle and/or vertical direction of the vehicle, a second longitudinal link, a second wheel carrier with a second wheel centre and a second longitudinal strut, forming a second coupling mechanism that is effective in a longitudinal direction of the vehicle and/or vertical direction of the vehicle, and a crossmember (114) which is connected fixedly to the first longitudinal link (102) and to the second longitudinal link and has a shear centre, wherein the first coupling mechanism has a first instantaneous centre of rotation (124) located on the front side and above the first wheel centre (106) and the second coupling mechanism has a second instantaneous centre of rotation located on the front side and above the second wheel centre, and a two-track vehicle with a chassis or an underbody, wherein the vehicle has such a rear axle (100) arranged on the chassis or on the underbody.
