Abstract (en)  
[origin: WO2020227565A1] A container for storing at least one personal care item includes a base plate and well. The base plate defines an aperture and has top and bottom surfaces. The well passes through the aperture and has: an open top portion and a closed bottom portion collectively defining a chamber accessible through the top portion, a seat abutting the bottom surface, and a flange overlying a portion of the base plate. A cap is removably secured atop the chamber and abuts the flange such that the flange seals between the cap and the base plate when the cap is secured atop the chamber. The well has an uppermost point and a lowermost point and a height defined therebetween, and the lowermost point is collapsible toward the uppermost point to a maximum distance of: at least forty percent of the height and no more than sixty percent of the height.
