Abstract (en)
[origin: WO2020225281A1] The invention relates to a pullnose belt with a chassis (11), which is supported on the ground (17) on a fixed side (12) of the belt and projects freely on the opposite free side (13). Drive and deflector rollers (22, 24, 25, 34, 35, 36), over which the endless belt (23) runs, are mounted in said chassis. One deflector roller (36, 37) is arranged on the end of wing-shaped support arms projecting from a point of fixing to a horizontally displaceable carriage (31).
