Abstract (en)

[origin: WO2021047826A1] In order to achieve a temporary barricading of entrances or the like using means which are simple to handle and produce, but nevertheless in a secure manner, the invention relates to a mobile vehicle blockade (10) having a base plate (14) and a bollard element (16) connected centrally to the base plate (14), wherein an edge (24) of a base surface (18) of the base plate (14) extends substantially such that outer regions of the edge (24) which are radially furthest from the center (32) of the base plate (14) are uniformly distributed on a common circle, and wherein the upper end (46) of the bollard element (16) is rounded or beveled.
