Abstract (en)

[origin: WO2020227223A1] A fluid delivery system including at least a housing (1302) for a charge-free pulsation dampener of a type utilizing elastomeric compression material (1102), but without the compression material therein, includes a system pulsation dampener (501). The fluid delivery system may include a fluid reservoir (110), a fluid pump (108), a manifold (104), a pulsation dampener (501), and piping (112). The fluid reservoir stores a fluid used for a drilling procedure. The fluid pump pumps the fluid from the fluid reservoir through the fluid delivery system. The manifold is located downstream from the fluid pump, and receives and combines fluids from the at least one fluid pump. The pulsation dampener receives the combined fluid from the manifold, and dampens residual pulsations from the manifold. The piping receives fluid output from the pulsation dampener, and transfers the fluid received from the pulsation dampener further downstream.
