Abstract (en)  
[origin: WO2020229322A1] The invention describes a target launching machine comprising a base (2) on which there is arranged an assembly (1) comprising a launching mechanism (7) and a drum (4) for storing targets, the assembly (1) being configured so as to be able to move relative to the base (2), the machine comprising a tilting device (20) that allows the assembly (1) to move relative to the base (2), the tilting device (20) comprising on one hand a first portion connected to the base (2) and comprising one from among a curved rail (10) and an element for guiding of the rail (10) in a single degree of freedom of tilting along the rail (10), and on the other hand a second portion connected to the assembly and comprising the other from among the rail (10) and the guiding element, characterized in that it comprises a pivot connection about a rotation axis A2 between the second portion and the rest of the assembly (1).
