Abstract (en)

[origin: WO202225311A1] The invention relates to a computer program product (1) for configuration of a control center (100), in particular a fire alarm and/or extinguishing control center, and to an associated method. The computer program product (1) comprises: a hardware configuration component (10) for configuration of hardware components such as modules and/or front plate components of the control center (100), a logic configuration component (20) for configuration of a functional logic of the control center (100), wherein the logic configuration component (20) is designed to provide functional components (221-229). The functional components (221-229) are decoupled from the hardware of the control center (100) and designed such that a reversible associating of functional components (221-229) to hardware components is possible.
