Abstract (en)

The invention relates to a garment steamer (100) for treating garments. The garment steamer comprises an ironing board (102) forming a planar surface. The ironing board is made of plastic material. A pole assembly (104A, 104B) supports the ironing board via a pivot coupling (108) arranged between the ironing board and the pole assembly. The ironing board comprises a first part (110) and a second part (112) which are detachable from each other. The first part (110) and the second part (112) extend in an opposite direction relative to the pivot coupling. Reinforcement means made of metal material are only arranged on one of the first part or the second part. The reinforcement means thus reinforce the rigidity of either the first part or the second part.
