Abstract (en)

[origin: EP3968499A1] There are provided a coil (10), a stator member (50), a stator (60), and a motor (70) that can, in the case of joining (connecting) a busbar and the coil's terminals (12, 12A, 12B, 13, 13A, 13B), simplify control necessary for joining such as positioning, actualize downsizing of a device (welding device or stator manufacturing device), and improve efficiency of joining work. The coil (10) is configured by winding a conductor, and its first and second terminals (12, 12A, 12B, 13, 13A, 13B) are extended out on a side of one surface (Sf1, Sf2) of the coil (10).
