Abstract (en)
There is provided an apparatus arranged to receive from at least one access node a first spatial relation indication for a first transmission to be made in a first direction; receive from the at least one access node a second spatial relation indication for a second transmission to be made in a second direction; receive from the at least one access node a third indication indicating whether the second spatial relation indication is to be used for a limited duration; and use the received indications for receiving and/or transmitting signalling with at the least one access node.
