Abstract (en)
[origin: WO2020232300A1] A system for scanning a client's hair color and dispensing hair coloring to change the client's hair color from an initial color to a target color is disclosed. The system comprises an input for reading the measured color from the scanning device, a processor configured to compare the measured color to a desired target hair color and develop a coloring protocol for changing the client's current hair color to the desired target color, and a dispenser for dispensing one or more formulations that follow the protocol.
