Abstract (en)

[origin: WO2020233967A1] The invention relates to a guide device for a moveable furniture part, in particular a drawer, comprising a catch (5) which can be moved along a guide track (6), which is pretensioned by an energy store and which can be moved at least between a parking position with a tensioned energy store and an end position with a less tensioned energy store, wherein the energy store can be coupled to an activator (10) between the parking position and the end position, in order to transmit a braking or accelerating force to the moveable furniture part, wherein the activator (10) has a metal support part (11), wherein the metal support part (11) is provided with a covering (12) made of plastic at least in a contact region with the catch (5). In this way, noise production can be lowered and the risk of injury can be reduced.
