Abstract (en)
[origin: WO2020228876A1] The invention relates to a massage device (10) for massaging the hands and feet, comprising an assembly consisting of at least one electric drive unit (11) with a massage disc (12), a body-part support (14) and a console (13). The massage disc (12) has a flexible construction and, as said disc rotates (W1), it moulds to the contour of the body part (37) in the contact region (38), (b1) producing an advantageous, uniformly distributed massage action. The position of the body part relative to the massage disc can be set and the massage pressure proportioned by means of an adjusting apparatus (25), (S) on the drive unit (11) and of the displacement of the body-part support (14) about the axis (c2).
