Abstract (en)

[origin: WO2020228941A1] Laundry-treating machine (1) comprising: a casing (2), a laundry drum to receive laundry to be treated rotatably mounted inside said casing (2), a porthole door (5), a main power line (10) having a main prefixed supply voltage (V1), a door power line (11), a door-lock switching device (12), which is configured to be switched to and from, between a close state and open state to respectively connect and disconnect the door power line (11) to the main power line (10), first electronic/electric loads (14, 15) connected to the main power line (11), second electronic/electric loads (20, 23) connected to the door power line (11), electronic sensing circuits (25a, 25b, 27, 32) connected to the main power line (10) a first switch (16), which is configured to be switched to and from, between a close state and open state to electrically connect and respectively disconnect the first electronic/electric loads (14, 15) and sensing circuits (25a, 25b, 27, 32) to the main power line (11) upstream said door-lock switching device (12), an electronic control device (13) which switches the first switch (16) to the open state, when the laundry-treating machine passes from an operating state to a standby mode, in order to electrically disconnect the first electronic/electric loads (14, 15) and the sensing circuits (25a, 25b, 27, 32) from the main power line (11).
