Abstract (en)  
[origin: WO2020228878A1] The invention relates to a cylindrical container (10), in particular a silo, for storing solids and/or liquids and/or gases and/or bulk materials or similar, produced from a helically bent, continuously overlapping sheet metal strip (20) forming a wall arranged in a cylindrical plane, wherein the upper and lower sheet metal strip edges arranged overlapping adjoining one another one another are connected to one another all around in a sealing manner at a continuous helical joint, characterised in that the wall of the container (10) consists of multiple sheet metal strips (20, 30, 40) arranged directly next to one another, i.e. in the cylindrical plane and parallel thereto.
