Abstract (en)
[origin: WO2020232485A1] The invention relates to a furniture drive (4) for moving a furniture part (3) which is movably mounted relative to a furniture carcass (2), comprising: - a support (9) for fastening to or in a furniture panel (6) of the furniture carcass (2), - an actuating arm assembly (5) which is arranged on the support (9) and has at least one movably mounted actuating arm (5a, 5b, 5c, 5d, 5e) for moving the movable furniture part (3), - a spring device (10) for exerting force on the actuating arm assembly (5), - an adjusting device (19) for adjusting a force exerted by the spring device (10) on the actuating arm assembly (5), the adjusting device (19) having an adjusting element (19a), which is rotatable about an axis of rotation (R), and a threaded portion (17) having a longitudinal direction (L). A point of application (18) of the spring device (10) along the threaded portion (17) can be adjusted by rotating the adjusting element (19a) about the axis of rotation (R), the axis of rotation (R) of the adjusting element (19a) and the longitudinal direction (L) of the threaded portion (17) forming an angle relative to one another. The angle formed by the axis of rotation (R) of the adjusting element (19a) and the longitudinal direction (L) of the threaded portion (17) relative to one another can be changed as the at least one actuating arm (5a, 5b, 5c, 5d, 5e) is moved.
