Abstract (en)

[origin: CA3126368A1] The invention relates to a method for monitoring a burner (2) and/or a behavior of a burner (2) by way of a measured ionization signal. The invention is characterized in that the ionization signal is measured between an ionization electrode (4, 4') and a counter-electrode (3) interspaced from a burner surface (2') of the burner (2). The invention further relates to a burner unit.
