Abstract (en)

[origin: WO2020260070A1] The invention relates to a method for data transmission between at least one first network (NW1; NW2) and at least one second network (NWA; NWB), wherein a) for at least one data transmission between the at least one first network (NW1; NW2) and the at least one second network (NWA; NWB), at least one connection between the first network (NW1; NW2) and the second network (NWA; NWB) is established and a datum or data are directed by means of a resource allocation unit (H) arranged between said networks, and b) for the establishment of the at least one connection, the resource allocation unit (H) exclusively allocates at least one net access resource (NWA\_IF), e.g. network cards or network adapters, which can be coupled to the second net, and a one-way communication unit (NWTap) arranged upstream of the net access resource for establishing a feedback-free data transmission direction.
