Abstract (en)  
The invention is about an advantage steam generator (01) and a steam generation system with an arrangement of heat-exchangers (11) within a hot gas path (02). To protect the facilities and to increase the efficiency at least at the output of several heat-exchangers (11) an attemperator (22) is arranged, wherein each of them (22) is connected via a fluid valve (23) with a distribution piping (21).
