Abstract (en)
[origin: WO2021013450A1] The invention relates to a rail vehicle for passenger transport, having at least two driven end cars (1), which are each supported on two end undercarriages (2), and having at least one middle car arranged between the end cars (1), wherein the middle car (3) is divided in the longitudinal direction thereof into two coupled car body sections (3.1, 3.2), the mutually facing ends of which are supported on an undercarriage (4) common to said car body sections (3.1, 3.2) and comprising a single track guidance unit and the mutually averted ends of which are each supported on an undercarriage (5) with at least two track guidance units.
