Abstract (en)
[origin: GB2585028A] A method and system comprising obtaining electronically first travel information on passengers (12) travelling on a train (1) of the train service at a first point in time. Further aspects include obtaining electronically second travel information (21) on passengers (22) waiting in or near one or more train stations (2) at a first point in time. The method comprises calculating the number of passengers on the train (1) at the second point in time by taking into account the first travel information (11) and/or the second travel information (21). The first and second travel information may relate to booking information obtained wirelessly from a mobile device carried by a passenger.
