Abstract (en)
[origin: WO2020234543A1] The invention relates to a beverage-dispensing device (18) comprising a base (19) intended to be fixedly mounted on a tank containing a fluid, a fluid dispensing nozzle (25) moveable in translation along an axis relative to the base, the nozzle (25) comprising a part for collecting and a part (37) for dispensing the fluid, said collecting part being able to activate the opening of a valve by translational movement of the collecting part, the collecting part and the dispensing part (37) being fluidly connected by a fluid circulation channel emerging on the collecting part and the dispensing part (37), respectively via at least one first opening and at least one second opening, the nozzle (25) comprising a support surface (32), the dispensing device (18) further comprising a lever (43) able to pivot about a fixed axis relative to the base (19), the lever (43) comprising an activation part (45) and a support part (44) coming into abutment on said support surface (32) of the nozzle (25), so that the pivoting of the lever (43) activates the translational movement of the nozzle (25).
