Abstract (en)  
[origin: WO2020234613A1] A bolt arrangement. The arrangement comprises an elongate body and an elongate bolt member selectively movable longitudinally in the body so as to in a closed position extend outwardly from a first end of the body to be engageable against an item or formation to provide closing. A closure member is provided at the second end of the body to close the body, and which closure member provides an opening through which the bolt member is slidably movable, out of the second end of the body.
