Abstract (en)

[origin: WO2020234117A1] The invention relates to an electromechanical device (2) comprising an actuator drive (4) which can be electrically actuated by a controller and an actuator (6) which can be driven by means of the actuator drive (4) and comprises a housing (8), wherein the actuator drive (4) has an electric motor (10) and a transmission (12), the actuator drive (4) has at least one electric line (14) for electrically connecting to the controller, and the electric motor (10) is connected to the actuator (6) so as to transmit a torque by means of the transmission (12). The aim of the invention is to improve an electromechanical device (2). This is achieved in that the actuator drive (4) is completely arranged in the housing (8) of the actuator (6) up to the electric line (14).
