Abstract (en)

An apparatus for abrading surfaces has a first manifold 16 mounted proximate one end of a shaft 6, and a second manifold 50 mounted distal to one end of the shaft. The first and second manifolds 16, 50 are constructed to receive and distribute a fluid under positive pressure and vacuum pressure. The shaft 6 is connected to the first and second manifolds 16, 50 to support the manifolds and the shaft includes fluid pathways to conduct air and vacuum flows of the fluid between the manifolds, and an end effector 10 for treating surfaces.
