Abstract (en)
[origin: WO2020239777A1] The invention relates to a wrist endoprosthesis (2) for functional replacement of the human wrist, comprising a radius component (4) that has a shaft (10) for anchoring in the radius, a head (12) and a first joint surface (16) which is formed on a distal head face (14); and comprising a carpal component (6) that has a proximal carpal face (22), a distal carpal face (20) and a second joint surface (24) which is formed on the proximal carpal face (22) and interacts with the first joint surface (16) of the radius component (4); characterised in that the carpal component (6) is substantially trough shaped, in order to at least partially surround the carpal bone. The invention also relates to a wrist endoprosthesis (2) having luxation protection (8), to a method for producing wrist endoprostheses (2), and to a computer program product.
