Abstract (en)

[origin: WO2020243677A1] A device for providing an energetic field to promote the body's self-healing process comprises electronics immersed in a dielectric oil in a first enclosure which accelerate and spin an energetic current within a gas-filled glass tube. The tube protrudes through a small opening into a second large metal(e.g. copper)-lined patient enclosure, such that the energy emitted from the tube is directed toward a circular concave baffle covered in a densely woven fabric. A plastic sheet optionally protects the patient from arcing with the baffle. Seating/support is provided to properly position the patient; as well as seating for the practitioner/therapist who both positions the patient, and provides mental and emotional guidance, to optimize patient receptivity to treatment.
