Abstract (en)

[origin: WO2020239412A1] The invention proposes a method for determining state information relating to a belt grinder (10), wherein the belt grinder (10) has at least one abrasive belt (18) for grinding a workpiece (14), comprising at least the method steps: ° providing measurement data relating to the belt grinder (10), ° determining the state information from the measurement data provided by means of a machine learning system (58), the machine learning system (58) being configured to determine the state information based on the measurement data provided. The invention also relates to a machine learning system (58), a method for training the machine learning system (58), a computer program, a computer-readable storage medium and a computer device (56), each of which are provided and configured to execute the proposed method. The invention also relates to a belt grinder (10) for carrying out the method and a grinding shoe (12) for use in a belt grinder (10).
