Abstract (en)
[origin: WO2020240862A1] The present invention relates to a train control system in a distributed computing environment. The train control system may include a train control server configured to communicate with one or more trains via a communication network. The train control server may include a parameter management unit configured to select, from a parameter file database, a first set of train parameters based on the first set of train data from the parameter file database, a communication unit configured to transmit the first set of train parameters to the first set of trains and receive a set of parameter setting confirmation data from the first set of trains, and a verification unit configured to verify that the set of parameter setting confirmation data achieves a consistency level with respect to the parameter file database.
