Abstract (en)
[origin: WO2020239790A1] A dispensing closure comprising an actuator disc and a base is provided. The disc is pivotably mounted on the base and is pivotable between a closed position which prevents fluid product dispensing and an open position which allows product fluid dispensing. The disc includes opposed trunnions and the base includes a side wall providing opposed gudgeons for pivotably receiving the trunnions. The gudgeons project inwardly from the sidewall.
