Abstract (en)

[origin: WO2020239883A1] The invention relates to a transfer station (1) for loading goods pallets (20, 20') in a logistics system, with a goods platform (3) having a receiving area (5), which is adapted for simultaneously receiving a plurality of goods pallets (20, 20') lined up along a longitudinal axis (A), a plurality of runners (7) for capturing the goods pallets (20, 20'), which can be displaced along the longitudinal axis (A) in the and at least partially outside the receiving area (5), wherein the runners (7) have a compensating device (15) with one or more compensating elements which can be moved on the runners (7) for the goods pallets (20, 20') captured by the runners (7), which compensating elements are designed to permit a compensating motion of the goods pallets (20, 20') transverse to the longitudinal axis (A).
