Abstract (en)

[origin: WO2020239556A1] The present invention relates to new silazane containingcoating compositions which contain a phosphazene catalyst. The coating compositions are particularly suitable for the preparation of functional coatings on various base material substrates to provideimproved physical and chemical surface propertiethereto.The phosphazene catalyst allows a fast and efficient curing of the silazane containing coating composition under ambient conditionsto provide a cured solid functional coating.
