Abstract (en)

[origin: WO2020240130A1] The present invention relates to a method for the protection of a hafnium-free, nickel-based monocrystalline superalloy part against corrosion and oxidation. The method comprises at least the following steps of: - manufacturing a hafnium-free, nickel-based monocrystalline superalloy part (1), - depositing on the part a first hafnium-free sublayer (2), - depositing, on the first sublayer (2), a second hafnium-doped sublayer (3), - depositing, on the second sublayer (3), a third hafnium-free sublayer (4), - sandblasting the third sublayer (4) to at least partially separate the third sublayer (4) and increase the surface roughness of an upper sublayer formed by the second sublayer (3) and at least partially by the third sublayer (4), - performing oxidation treatment so as to obtain at the surface a layer of hafnium-doped oxidised material (5), - depositing a thermal barrier layer (6) on the layer of oxidised material (5).
