Abstract (en)
[origin: WO2020250062A1] The invention relates to a device (1) for locking a weapon barrel with respect to a wall, the device comprising a receiving chute (8) which can be secured to the wall and intended to receive the weapon barrel and a holding arm (12) which is intended for holding the barrel resting against the chute (8). This device is characterised in that the chute (8) is rigidly connected to a piston (4) mounted so as to slide relative to a housing (2), the piston (4) sliding in a first direction (D1), and pivoting the holding arm (12) relative to the housing (2) between an open position and a closed position in which it holds the tube, the piston being able to be immobilised in a depressed position by a locking means (15).
