Abstract (en)  
[origin: WO2020239493A1] The invention relates to a vehicle control assembly for automatically controlling at least one vehicle (12), comprising a drive device in an enclosed spatial field (2) comprising a number of objects (4, 8, 10, 14, 16), wherein: the enclosed spatial field (2) has at least floor surface portions (66); a navigation system (22) for determining the position of the at least one vehicle (12) is provided in the enclosed spatial field (2); and the vehicle (12) has a vehicle control device (46) for controlling the vehicle (12). The invention is characterised in that a room sensor system (40) comprising at least one 3D sensor assembly (42, 44) is provided in the enclosed spatial field (2), wherein: the room sensor system (40) and the vehicle control device (46) are controllably connected to a room control unit (36); the vehicle (12) or each object (4, 8, 10, 14, 16) or person (20) can be detected by the sensor system starting from a predeterminable size; and at least one two-dimensional safety region (48, 50, 52, 54, 56, 58, 60, 62, 64) is associated, by means of the room control unit (40), with the vehicle (12), each object (4, 8, 10, 14, 16) and each person (20).
