Abstract (en)

[origin: EP3977897A1] This stretch function-added loading sheet is provided with one sheet body and an arbitrary number of force crimping units, wherein the force crimping units comprise two clamping block plates and one clamping jig, and on one surface of the sheet main body, the two clamping block plates are fixed on both sides of a folding centerline on the sheet main body. In a state in which the sheet main body is folded along the folding centerline such that the two clamping block plates overlap each other with the sheet main body on the inside, the clamping jig is fixed to the two clamping block plates so as to clamp the two clamping block plates. The stretch function-added loading sheet has a stretch function with which the sheet main body stretches by the clamping jig opening through application of a tensile force perpendicular to the folding centerline to the sheet main body, and shrinks when said tensile force is reduced.
