Abstract (en)

An anti-fouling unit (1) is configured to be arranged on a surface and comprises at least one electric circuit (30) including a light-emitting arrangement (31) configured to emit anti-fouling light and a power-receiving arrangement (33) configured to receive power to be used for powering the light-emitting arrangement (31) from an external power-supplying arrangement located on or near the surface. Further, the anti-fouling unit (1) comprises a carrier slab (40) carrying the at least one electric circuit (30) and having an emission surface (41). The power-receiving arrangement (33) is configured to allow positioning of the anti-fouling unit (1) on the surface in at least two distinct orientations both involving enablement of the power-receiving arrangement (33) to effectively receive power from the external power-supplying arrangement.
