Abstract (en)
[origin: WO2020247875A1] Described herein is a tour iron having a golf club head with a faceplate, a body, and an insert. A sole, top rail, rear, and the faceplate enclose a cavity within the body. The cavity can house the insert. The insert can comprise a low-density material, allowing weight to be concentrated around the peripheral edge of the golf club head. The rear of the golf club head has an inflection seam running from the heel to the toe. The golf club head has an upper portion, above the inflection seam and a lower portion below the inflection seam. The lower portion can have a depth greater than the upper portion depth. The striking surface can be formed by the low-density insert. The golf club head has a comparatively high moment of inertia and a low center of gravity. Other embodiments and methods are described herein.
