Abstract (en)

[origin: WO2021018656A1] The invention concerns a valve (1) comprising - a valve body (10) that has a cavity and that bears against a seal (40) provided with a central opening, and - a seat (20) that is able to move in the cavity, the seat bearing against the seal in the closed position and being spaced apart from the seal in the open position. The seat has a cavity that bears against the seal in the closed position, and is spaced apart from the seal in the open position. A rod (60) is attached in a non-detachable manner in the cavity, forming a seat/rod assembly, the rod being traversed, in its portion situated inside the cavity, by windows (612) opening in the outlet channel, the free end of the rod protruding out of the cavity and passing through the central opening of the seal.
