Abstract (en)
[origin: WO2020245065A1] The invention relates to a building structure comprising a first building structure part (2), a second building structure (3), which is movable relative thereto, and at least two structural bearings (5) acting between the two building structure parts, wherein the second structural bearing (5) is a horizontal force bearing (5), which is unsuitable for transmitting vertical loads and is fixed in one axis or two axes in the horizontal direction, and comprises a first anchor structure (6) and a second anchor structure (7). At least one first guide element (17) having a first sliding surface (18) is detachably connected to the first anchor structure (6), and at least one second guide element (19) is detachably connected to a second sliding surface (20) opposite the first sliding surface (18), wherein the second anchor structure (7) and/or the at least one second guide element (19) overlaps the first building structure part (2) in the horizontal projection.
