Abstract (en)

[origin: WO2020245360A1] The invention relates to a form element (1), an arrangement having a form element (1) of this type and a method for forming at least one part of a formwork for a concrete part using this form element (1), wherein the form element (1) can be flexibly and three-dimensionally deformed in its first state, and wherein the form element (1) is rigidified and stabilised in its second state, in particular in a deformed position of the form element (1), wherein the form element (1) comprises at least two flexible layers (2) which are arranged flat on top of one another, and wherein the layers (2) are, in particular reversibly, connected to one another in the second state for the stabilising of the form element (1).
