Abstract (en)
[origin: GB2584460A] A security fence panel (1 fig.1) with a plurality of perpendicular security mesh sheets (3,4 fig.2) which are spaced apart in use, the mesh sheets 3,4 are connected by intermediate sheets 6 which are inclined to the horizontal. The intermediate sheets 6 may be connected loosely, via a spiral connector 10, to the security mesh sheets 3,4 to allow relative movement between them allowing the panel to be collapsed for storage.. The intermediate sheets 6 may be inclined at an angle to the security mesh sheets 3,4. The fence panel may be at least 1.7m high and topped with barbed or razor wire (12 fig.10). The panel (1 fig.1) may form part of security fencing wherein the panels are secured to support posts (2 fig.5) via tamper-resistant fasteners.
