Abstract (en)

[origin: WO2020245222A1] The lock (100) comprises: a catch (3) and a pawl (4) hinged to an intermediate plate (1), and inserts (6) made of anti-noise material that is different from the material of the intermediate plate, disposed in the intermediate plate (1) around a first hole (F1) and a second hole (F2) of the intermediate plate. The inserts (6) are provided with an end (60) that protrudes from a first side (1a) of the intermediate plate to come in contact with the catch (3) and with the pawl (4), in such a way that, during their movement, the catch (3) and the pawl (4) slide on the ends (60) of the inserts, minimizing the noise.
