Abstract (en)

[origin: WO2020249305A1] The invention relates to a method (10) for operating a teleoperated vehicle (20), characterized by the following features:
- in normal operation (11), the vehicle (20) is in active exchange (19) with a first active operator (41) in a first control center (51) on an active transmission channel (18) via a first passive operator (31), while a standby transmission channel (23) to a second control center (52), which standby transmission channel is switched by means of a second passive operator (32), is on operational standby (24), and - if the standby transmission channel (24) fails (12), a third passive operator is sought (13), and, if within a first time period (21) the third passive operator is found (14), the normal operation (11) is maintained.
